Are you a woman with bulimia nervosa? Help our research.

We are looking for:

- Women aged 16+
- Current diagnosis of bulimia nervosa
- Fluent in English

What does it involve?

- You will be offered an **online appointment** with a clinical psychologist.
- The psychologist will check you are eligible for the study.
- You will complete questionnaires and a **clinical interview** that explores if you experience traits associated with ADHD.
- This typically takes around two hours.
- We will use this information to understand **how many women with bulimia nervosa also experience ADHD traits**.

What is the impact on me?

- We **cannot give an ADHD diagnosis**, but we will tell you if the interview suggests high traits and give you a written report with our findings.

If you are interested in taking part, or want more information, please email emma.kinnaird@psy.ox.ac.uk

Online study poster Version/Date: 3.0, 05/11/2026

Project Title: Towards a better understanding of the prevalence and clinical implications of ADHD in women with bulimia nervosa

IRAS Project number: 359624, REC Reference number: 26/SS/0002

Chief Investigator: Prof. Paul Salkovskis, paul.salkovskis@hmc.ox.ac.uk . Department of Experimental Psychology , Anna Watts Building, Radcliffe Observatory Quarter, Woodstock Road, Oxford, OX2 6Gc
